Inhibitors of Spermidine Synthase for the Treatment of Osteoarthritis and Cartilage Rehabilitation

Abstract of the Disclosure

This invention provides a method for the treatment of a subject in need of treatment for osteoarthricomprising administering to said subject an amount of an inhibitor of spermidine biosynthe sufficient to effect a substantial inhibition of spermidine biosynthesis. This invention also provide the use of an inhibitor of spermidine biosynthesis in the treatment of a subject in need of treatment of osteoarthritis in an amount sufficient to effect a substantial inhibition of spermidine biosynthese. This invention further provides a method of preparing a therapeutic composition for the treatment of a subject in need of a treatment for osteoarthritis and the invention further provides a method identifying an inhibitor of spermidine biosynthesis, whereby the inhibitor is a spermidine synth inhibitor.
